## Reported Benefits of Papershavings compared to Pine Shavings 2018

### USAGE:

3 typical bags of pine wood shavings = 2 bags of Papershavings

{One bag of Papershavings is compressed into a 2.2 cubic foot bag. When spread out it covers 13 cubic feet}

Less Papershavings product is needed when cleaning out stalls compared to pine shavings because by removing wet Papershavings product, (which is easy to see), dry product can remain in the stall, compared to normally needing to remove and replace all the pine shavings in the stall

Bottom line: Cost is less using Papershavings than wood shavings due to not needing to use as much product

### ODOR:

When properly used most ammonia smell in the barns is typically eliminated with Papershavings

### HEALTH ISSUES:

Many animals have been reported to be allergic to wood shavings are normally ok with Papershavings

Many animals are reported to eat the pine shavings resulting in ill-health issues, customers buying Papershavings due to problems related to this issue have reported they find their animals do not experience these ill-health issues with Papershavings

Some customers with horses have reported respiratory problems their horses experience related to using pine shavings which their horses do not experience with Papershavings
